★ Please connect the connector fully as shown in the diagram

How to use the controller

Temperature setting

Turning this dial sets the use temperature.
Turning the dial to the right increases the temperature.

*It will automatically stop when the set time has passed.
*The device will automatically shut off to prevent overheating depending on the environment.

Power setting

Press the corresponding button to power on the regulator.
Pressing the button once during operation will turn off the power.

* The basic operation time for this function is 120 minutes.
* When the set time has elapsed, it will automatically shut off.

Indicator lamp for the set status

Power, setting time, and time indicators light up based on the setting.

* Time is displayed from 2 to 8 hours, depending on the setting step.

Time setting

Pressing the button changes the set time value.
Each press adjusts the time from 2 to 8 hours.

Safety Precautions

⚠ Read the instructions for use carefully before using the device.

- The recommended usage time for this product is 30 minutes.
- After use, be sure to disconnect the power and cord.
- Do not use for an extended period of time during initial use, and gradually increase usage time after adaptation.
- If you feel any abnormality, pain, or discomfort during product use, stop using it immediately.
- For sensitive skin, be careful not to get skin burns on the heated area.
- Wear light clothing to prevent direct contact between the heated area and skin during use.
- For the elderly, use with the observation and supervision of a caregiver, taking safety precautions.
- If you experience discomfort or abnormal symptoms while using the product, stop using it immediately.
- Be cautious when using the product immediately after intense exercise or a meal.
- The product has a built-in safety sensor device to prevent overload and ensure safe use.
- Be careful not to apply pressure or bend the product, as it may break.
- Avoid using or storing the product in high-temperature and humid environments.
- When unplugging the product's connector, do not apply excessive force or pull.
- Be sure to use the designated connector and adapter provided when using the product.
- Be careful not to let liquids or water enter the product during use.
- If water enters the product, immediately turn off the power and disconnect the power cord from the outlet.
- Do not place the product near electric stoves, other heat sources, or heaters during use or storage.
- When not in use, turn off the power and make sure it is completely turned off.
- Do not disassemble or repair the product at will (this may result in the warranty and A/S being discontinued).
- If foreign matter is attached to the product, wipe it gently with a soft cloth.
- If there is an issue with the product, stop using it and contact the A/S center.
- If the product overheats or emits a burning smell during use, stop using it immediately and disconnect the power cord.
- Be careful not to let sharp objects such as knives, forks, or nails damage the product.

Troubleshooting

⚠ If any problem occurs while using the product, refer to the following solutions.

Problem	Type of cause	Solution
Near-infrared light flashes.	Disconnect Controller connector	- Check the controller adapter connection state. (refer to 2page.)
The product does not work.	Disconnect Power and Power Cord	- Check the power plug connection state. - Check that the main power and power switch are turned on. - Check that the correct voltage is used.
	Disconnect Controller connector	- Check the controller adapter connection state. (refer to 2page.)
The product sudden stop while in use.	Prevention of overheating	- When the product is used for a long time, the product automatically switches to overheating prevention mode due to increase in temperature. In this case, turn on the power and wait 30 to 50 minutes for the heat to cool.
Only certain parts are overheated.	Motion sensor in operation	- The sensor heats the object contact area. Do not leave objects in one place for a long time to spread heat evenly.

If the problem persists, turn off the power supply, disconnect the power plug from the outlet, and then ask the service center.
